Assignment 3

by [Jainit Bafna](#) - Wednesday, 13 March 2024, 2:20 PM

Hey all,

Assignment 3 has escaped into the wild! 🦁🐱

Yes, you read that correctly. Assignment 3, affectionately nicknamed "Vector" by absolutely no one but myself just now, has broken free from its chains in the depths of my computer and is currently frolicking in the meadows of our learning management system, eagerly waiting for brave souls to tame it. 🙌

But fear not! A guiding light beckons on the horizon. **Tomorrow, we will host a tutorial to equip you with the knowledge and tools necessary to wrangle "Vector" back into submission.** 🌟 Join us as we embark on this adventure together! **We will announce the Venue and Time EOD.**

Cheers,

iNLP TAs. 🚀

Hi TAs,

Please confirm if we are allowed to use lilmatrix and svds function both from scipy.sparse library.

by [Animesh Das](#) - Saturday, 23 March 2024, 4:42 PM

In the skip-gram model, for each target-context sample pair, how many negative sample pair is expected, for feeding to the similarity and softmax function? Is there any proportion?

Re: Assignment 3

by [Vithesh Reddy Adala](#) - Sunday, 24 March 2024, 2:57 AM

Can we train all the models on a subset of the train data? Like 20k or 30k sentences?

Because the whole training data consists of around 2 lakh sentences, and it's taking more than 20min (on CPU) for an epoch incase of skipgram/downstream task if we take the whole training data. It's highly difficult to finish the assignment if we have to train on such large data.

Please provide clarification on this.

**Re: Assignment 3**

by [Rhythm Aggarwal](#) - Sunday, 24 March 2024, 5:51 PM

Hi tas,

Given the amount of compute time required for training and inference of the data provided and also the upcoming Holi festival which makes it difficult for many of us to give time to the assignment, we kindly request for a deadline extension. This will enable us to learn more and not do the tasks for the sake of completion

Apologies for any inconvenience.

**Re: Assignment 3**

by [Nanda Rajiv](#) - Sunday, 24 March 2024, 5:58 PM

Hello TAs,

Given that 23rd and 24th were Meltdown, a major music event, and 25th is Holi, it has been challenging to work on the assignment at all with these events.

We would really appreciate an extension of a few days to give us the opportunity to work on the assignment even after Holi, so we can give it the due effort, and maximise our learning.

Thank you.

**Re: Assignment 3**

by [Surtani Monica](#) - Sunday, 24 March 2024, 6:48 PM

Hello TA's,

Assignment 3 is a bit hefty and difficult. Computations are taking more time. An extension would be really helpful for us.

**Re: Assignment 3**

by [Radhika Garg](#) - Sunday, 24 March 2024, 5:53 PM

Dear TAs,

This is an earnest request to ask for an extension for the assignment 3. The assignment is really hefty and is taking too much time on computations of both the embeddings. An extension would be really helpful to complete the assignment . With that a proper learning would also be ensured from this, if given a little more time.

Thank You.

by [Chowdam VenkataThirumalaKumar](#) - Sunday, 24 March 2024, 6:05 PM

Dear TAS,

An extension for assignment 3 would really be helpful as there are issues with compute and memory.

Thank you.

by [Patanjali Bhamidipati](#) - Sunday, 24 March 2024, 11:03 PM

Hello all,

The deadline has been extended!! The new deadline is **28th March 11:59 pm**. Please note, no further extensions will be given.

Happy Holi everyone.

Warm regards,

iNLP TAs.

by [Srijita Mukhopadhyay](#) - Thursday, 28 March 2024, 12:01 PM

Hello everyone!

We have noticed that it might take some more time to capture "Vector" and bring it back to submission 🤖 Thus, we want to give all the brave souls some more time. **The deadline of the assignment has been extended to 31st March, 2024 11 59 PM.** Please make wise use of your time 🕒, we can't wait any longer to bring Vector back. 🐯 🐯

Cheers,

iNLP TAs 🚀
